170.00€ plus VAT.

Advice: Non-native speakers are eligible for additional exam time

The foundations of RE@Agile are RE's view on Agile values as well as Agile views on Requirements Engineering values. The content includes the classification, assessment and application of Requirements Engineering artifacts and techniques in the context of Agile approaches as well as the use of Agile artifacts, techniques and essential process elements in Requirements Engineering processes.

The core principles of RE@Agile are:

- Requirements Engineering and Agile approaches can mutually leverage each other
- Lightweight and highly adaptive processes
- Close collaboration within the team and with key stakeholders, and just-in-time-requirements
- Situational and selective requirements elicitation, analysis, specification and refinement
- Avoid less relevant activities and functionality and ensure the minimum viable product
